

TCCC Guidelines

JTS / CoTCCC

DEPLOYEDMEDICINE

SUMMARY OF 2024 CHANGES

4. Airway Management

- Simplifies the airway management sequence in tactical field care.
- Better defines the recovery position with head tilted back and chin away from chest.
- Eliminates extraglottic airways.
- Provides more specific indications for surgical cricothyroidotomy.
- Establishes need for frequent reassessment of SpO₂, EtCO₂, and airway patency.

5. Respiration / Breathing in tactical field care

- Consideration of a properly-sized Nasopharyngeal Airway when using a BVM.
- Ventilate with a 1000ml Bag-Valve-Mask (BVM).
- Use continuous EtCO₂ and SpO₂ monitoring.

adds Moderate and Severe Traumatic Brain Injury to tactical field care.
